

INSTALLATION INSTRUCTIONS

Video instructions available online: www.wheelbands.com

KIT CONTENTS: Mounting Tracks • Color Inserts
Preparation Wipes • Application Tool

① Wash wheels and allow to thoroughly dry. Use preparation wipes to remove residue and contaminants from rims. ② For a clean shaped end joint, cut 1" from end of track using sharp cutter or by scoring with a knife and then snapping off. (*Note: To practice cutting or scoring technique, use extra length of track supplied on each track.*) Peel off short section of red backing tape at freshly cut end of track. Lightly press down track to align and mount in position around the rim. ③ Use application tool as guide to line up track on rim. ④ Mark where the track ends meet. For best appearance leave no gap between ends of track. ⑤ At measurement mark, cut with sharp cutter or score with knife and snap off excess track. ⑥ Lightly press last section of track into place. Check your work and alignment. If satisfied, begin insert installation. Otherwise, lightly pull up track and reposition. ⑦ Begin inserting one end of color insert directly opposite the track joint (see photo). Insert should "snap" into place with hand pressure or with aid of application tool. ⑧ Mark, score and cut color insert 1/32" (1 mm) longer than what appears to be flush. *It is better to slightly squeeze the ends together than to cut the insert short and leave a gap.* ⑨ Use application tool to firmly press down and secure both insert and track. Be sure to press down around entire rim. Repeat for other wheels – *or use first completed snap-in insert as a guide to cut additional tracks and inserts.*

CAUTION: Wheel or tire shine polish, which may contain silicone or other oils and waxes must be removed for Wheel Bands to properly adhere to rim surface. Residue on the wheel surface, or on your hands when handling the backing tape during installation will block the tape from adhering to wheel. The mounted track should not slip off or be easy to pull up after application. To remove residue, thoroughly wash with soap and water, rinse with clear water followed by a degreaser. Use clean rags or paper wipes, avoid picking up and transferring residue from tires to the wheel surface.
