## Installation Instructions

### 1. Remove original plastic tank

- 1.1 Ensure engine has cooled down and coolant is not hot.
- 1.2 Remove and retain the original Mazda Cap from the factory tank, this will be reused.
- 1.3 Make a note of the coolant level in the original plastic tank, it may be necessary to remove some fluid during installation and you will need to top it up once finished.
- 1.4 Remove existing plastic expansion tank, it is secured with one bolt and two nuts. Retain the fasteners, they will be reused.
- 1.5 Disconnect the two upper hoses, making a note of which hose connects to each barb. Retain the hose clips, they will be reused.
- 1.6 Disconnect the lower hose. Retain the hose clip, it will be reused.

Note: some fluid will be in the hose, be prepared to catch this in a container

- 1.7 Empty the contents of the original tank into a container.
- 1.8 Remove the overflow hose as this will be reused.

### 2. Install the DaveFab tank

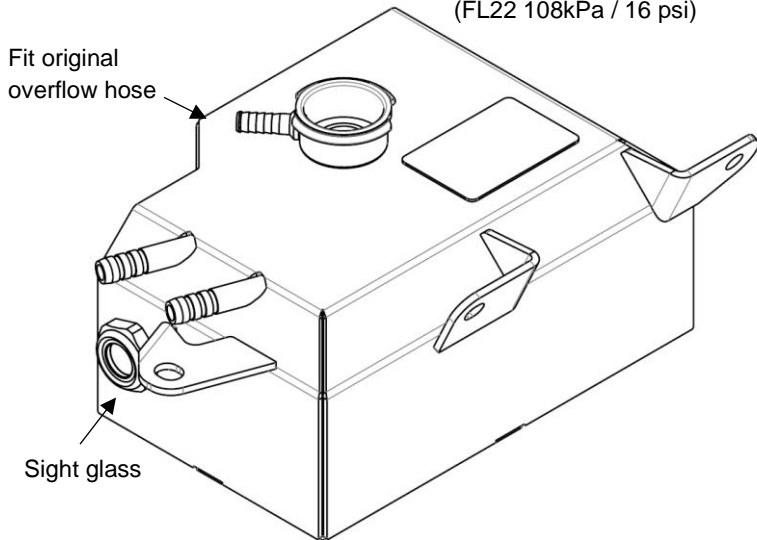

- 2.1 Connect the lower hose, securing with the original hose clip.
- 2.2 Position the DaveFab tank and secure with the original fasteners.
- 2.3 Reattach the two upper hoses to their barbs (front or rear) and secure with the original hose clips.
- 2.4 Refill the tank to the original level.
- 2.5 Fit the original Mazda Cap (FL22 - 108 kPa / 16 psi)
- 2.6 Ensure there is no air in the system. If you are unsure please consult a qualified mechanic.

## IMPORTANT

Use only OEM Mazda Cap  
(FL22 108kPa / 16 psi)

## IMPORTANT

This product is not compatible with Stant or other aftermarket radiator caps. For best performance we always recommend using the OEM Mazda Cap.
