1d	1	773-005 or 773-025	PANEL, RADIATOR COOLING *not shown

Read and understand these instructions before beginning the installation.

Images may vary from actual product.

Installation instructions:

- 1) Open and prop the hood. Let the radiator cool to ambient temperature.
- 2) Remove the two top radiator securing brackets.

Figure 2

Installation Instructions

- 3) Remove the headlight bolts closest to the center of the car. Remove the front fascia support bolts adjacent to the previously removed headlight bolts.

- 4) Set a spacer on the each of the four empty bolt holes.

- 5) Set the cooling panel on the car while keeping the spacers aligned with the bolt holes. Use the provided hardware to secure the panel to the car. Install the upper radiator mounting brackets. Snug all fasteners down to final torque.

- 6) Check the hood for rubber bumpers. If it has them, they will need to be trimmed (shortened) or removed all together to allow the hood to close properly. The cooling panel sits up a bit higher than the factory touch point for these bumpers.
